The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AGCTGATTCAACAATTGATCTCTATTTCAATCGTGATCTATCAGCTGTGGCCAATGAGCC 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        461

                                                                                                                                                                                                                                     The present invention relates to novel protein and coding sequences f wheat. The proteins are wheat starch synthases, designated SSII and SSIII. These can be used in the modification of plant starch content composition, and to screen plants to identify mutations which affect starch content and composition. The starch can then be used in food products, such as flour, and in films, coatings, adhesives, building materials and packaging materials

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel protein and coding sequences from wheat. The proteins are wheat starch synthases, designated SSII and SSIII. These can be used in the modification of plant starch content or composition, and to screen plants to identify mutations which affect starch content and composition. The starch can then be used in food products, such as flour, and in films, coatings, adhesives, building materials and packaging materials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and WST-II,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             <u>Aactroscrigagaaaatratrosargaagaacaagcrigtrigtrirrrocagaggriga</u>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                 The invention relates to isolated starch synthase DU1 homologue polypeptides and their polymucleotides. The polymucleotide is useful for polypeptides and their polymucleotides. The polymucleotide and transforming transforming a cell and for producing a transforming a plant cell with the polymucleotide and regenerating a plant from a plant cell with the polypeptide is useful for preparing antibodies. The polymucleotide is useful for preparing antibodies. The polymucleotide is useful for creating in mapping the gene that they are a part of, and as markers for traits. In they are a part of, and as markers for traits transgenic plants in which the polympclede is present at higher or lower transgenic plants in which the polympclede is present at higher or lower levels than normal or in cell types or developmental stages in which they can be not normally found, for altering the level of starch synthesis and carbohydrate composition in the plants, and to design and produce primers or probes. The present sequence is rice starch synthase DU1 homologue con a probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TGACAACTTTATCCCGGTCCACTACACTTGTGAGAATGTGGTTGAAGGCAAGAGGCTGC 2080

The invention relates to isolated starch synthase DU1 homologue compositions and their polymucleotides. The polymucleotide is useful for polympeptides and their polymucleotides. The polymucleotide is useful transforming transforming a plant cell with the polympelotide and regenerating a plant from a composition of the polympeptide is useful for preparing antibodies. The polympeptide is useful for preparing antibodies. The polympeptide is useful as probes for genetically and physically companing the gene that they are a part of, and as markers for traits contained to those genes. The polymucleotide is useful for creating contained to those genes. The polymucleotide is useful for creating contains in which the polympeptide is present at higher or lower contained the polympeptide is useful stages in which they can be composition in the plants, and to design and produce primers or probes. The present sequence is rice starch synthase DU1 homologue contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               rgaggciticctrgaccracgacgrcrcrcrcgcarcragararacgcrgcrcrgact 2370
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
